

Climbing Centre

Landmark Buildings - Public work

We approached the climbing centre about their lighting after seeing what the previous lighting company had installed. We produced lighting calculations and installed a sample area to prove that our solution would be much more suitable for the centre. Upon seeing the sample area the client gave us the green light to apply our lighting design to the rest of the site and also re-design the emergency lighting at the same time.

The space now feels much lighter and it is easy to differentiate between the colours of the climbing holds.

PROJECT MANAGEMENT

lighting design

- Full lighting design in CAD
- Lighting calculations
- Installation of sample area
- Specification booklets
- Co-ordination with contractors
- Finished site commissioning
