

Harrods

Retail work

Detailed design development of the Harrods Terminal 3 site. The main brief for this project was to provide lighting to all of the individual brands within the store as well as the Harrods branded areas. This was to be completed in LED and utilise a complex lighting control system.

We designed and installed the colour changing walk through arch in the middle of the store, and the long coloured LED detailing to the ceiling coffers.

PROJECT MANAGEMENT

- Full lighting design in CAD
- Lighting calculations
- Specification booklets
- Co-ordination with contractors
- Specific delivery arrangements
- Mid-contract progress meetings
- Pre-opening commissioning of lighting
- Control system programming
