

# Lakers - Southend Airport

Restaurant work

This was a great location and an interesting space for which the client let us write our own brief. Working closely with the team at Southend Airport, we helped to design, develop and install this lighting solution. The theme was based upon Sir Freddie Laker. The interior was comfortable, modern and the atmosphere to become a relaxing bar and restaurant.

Detailed LED lighting layout and a control philosophy were produced to ensure the areas achieved the desired illumination. Furthermore an installation and wiring drawing with schematic for the RGB LED was produced to maintain the ceiling theatrical elements remained in-sequence. The client was very happy with the day-to-day running of the lighting control system, as well as the overall outcome of the environment and illumination levels.

## PROJECT MANAGEMENT

- Full lighting design in CAD
- Lighting calculations
- Specification booklets
- Stock control
- Co-ordination with contractors
- Specific delivery arrangements
- Pre-programing & commissioning of lighting
