

Nissan - Motorline

Showroom work

This double height showroom and workshop building required full lighting and energy calculation with 3D illumination results, prior to client approval. The specification of the twin gimble LED units provided the majority of the required illumination levels. The main showroom was split with decorative bespoke pendants to highlight point of sale, open plan offices and a vehicle handover area. The workshop was designed to achieve the required working illumination from efficient, high out-put suspended LED luminaires.

PROJECT MANAGEMENT

- Full lighting design in CAD
- Lighting calculations
- Specification booklets
- Energy calculations
- Stock control
- Co-ordination with contractors
- Mid-contract progress meetings
- Pre-opening commissioning of lighting
