

Vauxhall Tower

St Georges Wharf

Landmark Buildings - Public work

We were approached by the Architects for the tower development, to see if we may overcome a lighting design issue. After a detailed brief, we provided manufacturing drawings and working samples. Following which we gained the opportunity to supply our custom 'plaster in' slot light. Several lights were to go in each of the 267 apartments over the 50 floors.

We designed and produced prototypes which we signed off by the client. We then begun production of the 800 lights which were then installed on site over the space of a year.

PROJECT MANAGEMENT

- Custom product design in CAD
- Working prototypes
- Lighting calculations
- Specification booklets
- Co-ordination with contractors
- Specific monthly delivery arrangements
